

# The STAR-CHRONICLE

Wainwright—Edgerton—Chauvin

Authorized as second class mail matter by the P.O., Ottawa Combining The Wainwright Star, The Chauvin Chronicle, and The Edgerton Enterprise in a weekly newspaper serving the major portion of the Wainwright Municipal District.

L. D'ALBERTANSON, Editor and Publisher  
Wainwright Alberta

## A POSSIBILITY

We were very pleased to receive the letter which is appears in our letters to the editor column this week from an old friend, Bob Dunsmore.

Most people around Wainwright will know Bob a lot better than does the Editor. In our minds he stands out as an enthusiastic and capable member of the Oddfellows Lodge, and as one who was possessed of considerable dramatic talent, and who was largely responsible for some very fine performances put on in Wainwright either under his direction or with his assistance.

Bob's suggestion that the Chamber of Commerce give consideration to the establishment of a LaCrosse league in this area is perhaps more timely than one might suppose. To many of us LaCrosse is a rough and tough game that the old timers talk of, which usually rated about two broken ankles per game, and was as much a test of virile manhood and general toughness as it was amusement.

However, it appears that LaCrosse has been to some extent modernized, and stripped of some of its rough stuff is again coming to the fore as a sport of high calibre and great entertainment value.

Of course it would take a lot of groundwork before teams could be organized and trained, and play started, but the Executive of the Chamber of Commerce has already had the matter under consideration and will investigate any possibilities that may exist.

If LaCrosse is to be started in the province, there appears to be no better place than right in this district.

## ARMY PUBLIC RELATIONS GOOD

Army public relations in Wainwright, as in other towns adjacent to military camps, always poses a problem. It is pretty obvious that a cross-section of army personnel is much the same as a cross-section of human beings in any profession. In a few thousand men in any vocation or walk of life there will be a few who "kick over the traces." The unfortunate feature of the whole thing is that, like a sore thumb, these few command a great deal of attention.

It must be realized, too, that spare time is sometimes a difficult thing to use, and with the limited facilities available here for the use of leisure we naturally find those who have a tendency to make their own excitement.

On the whole the boys stationed here are as fine a lot of young fellows as one might wish to meet, and much can be accomplished in maintaining their fine record for good conduct by making them feel at home, and extending to them our friendship and our respect.

## WE NEED IT TOO

We notice the following write-up in the Fort Record: "The passing of the sewage and water by-laws by the ratepayers is the final step necessary in making available to residents of the town all modern facilities that a city has to offer."

"These facilities, along with gas, which will be turned on this fall, might be the means of inducing many who are now renting to think seriously of building their own homes. They may also induce many district residents who had planned on buying or building in the city to change their plans and build a home here."

The writeup then went on to state that a meeting was being held, at which representatives of the Central Mortgage and Housing Corporation would be present, where plans would be discussed for the establishment of a housing scheme at Fort Saskatchewan.

Wainwright has enjoyed the gas for many years, and in the very near future will enjoy sewage and water facilities. What is more, Wainwright with the army camp, has an even more pressing housing problem than has Fort Saskatchewan. The Chamber of Commerce executive met during the past few days and did a little concentrated thinking on the matter. As result information is being sought from the Military as to whether this camp is to be a permanent camp, and when this assurance is forthcoming, the Chamber will proceed to press for the establishment of a housing scheme here which would assure not only civilians but army personnel of adequate housing accommodation.

## MAY WE HOPE?

Opinions reaching us regarding frost damage are quite cheering. It appears that damage on many farms is much less than was at first feared, and quite a number of farmers are of the opinion that damage to their particular crops was negligible. This is indeed cheering news. It is very seldom that we get a crop like this year's and to have it damaged too severely by frost would be a terrible blow both to our feelings and to our pocketbooks.

## A KEY TO HAPPINESS

To help others, you don't have to be an efficiency expert in the art; the main thing is the intention. You may be crude and clumsy, wasteful and ineffective, but if you sincerely try to help, your attempt produces good. The one you are trying to help knows your intention, and is strengthened and encouraged by the magic of your sharing. In nearly every case, your simple desire to help, converted into action, produces the good sought. But perhaps the greatest good is the good that you yourself get out of the attempt. Service to others delivers even more joy to you than the joy you deliver to them. In doing good, you free yourself from the terrible burden of self, you escape from yourself into a clean world of joy and light. The good you simply try to do, regardless of the outcome, is always a success inside yourself.

Unselfish giving is your most efficient formula for happiness. For you have missed the greatest of Self; you have felt Life and Love, and you are now words bigger than you were before you began the project.—James T. Mangan.

## THE GATHERING STORM!

## Joe Rutledge Says

By Joseph Lister Rutledge

### Look Ahead and Ponder

The cold war, which, almost overnight, turned into a very hot war in Korea, is now very much our business. Canadian warships are operating in the Pacific under United Nations command. Canadian transport planes have been allocated to the theatre. These are more than gestures. They represent a position from which we cannot retreat with dignity or safety. They represent one more dramatic step toward that all-out war, that we still hope to escape, but for which we must now more energetically prepare, knowing that should it come, we will no longer be on the fringes of the conflict.

With these new responsibilities before them, many thoughtful Canadians are beginning to ask themselves whether in the light of these possibilities, which were never very distant, we have not rather recklessly used up our resources. True, the welfare measures we have undertaken are admirable in intent, but have they been used up for personal security, measures that were needed for national security?

Consider a few basic figures and the implications involved. We are presently providing, in part, for 4,335,193 children.

## Letters to the Editor

Wainwright, Alberta  
August 23rd, 1950  
To "Parents and Teachers"  
c/o Star Chronicle,  
Wainwright, Alberta.

Dear Parents and Teachers:  
Suggestion has been made to our organization, that the school lunch period should be cut down to one hour, in order that school might be closed daily at 3:30 instead of 4 o'clock. This would enable the last of the bused in students to be home earlier and make a more pleasant evening for them. Some of these children reach their homes as late as 6 o'clock or even after.

There are a few "town dwellers" not in favour of this alteration, but we are sure that upon regarding the idea from the country children's point of view, (many of whom have chores to do after arriving home) these also will be in favour.

Please talk it over with a Home and School member, or come to the first meeting of the Home and School Association in September (date to be announced later) in order that we may have your opinion before us.

Yours truly,  
(Mrs. Stan) Winifred E. Bain  
Sec.-Treas. Home and School Association, Wainwright.

3424 Nelson Ave. Burnaby  
New Westminster, B.C.  
August 21st, 1950

Mr. L. D'Albertanson  
Editor & Publisher  
Wainwright, Alta.  
Dear Sir:

Picked up your new paper under date of August 18th, and with interest your leading editorial, "UN-USED SPACE".

I can quite understand how you and your fellow townsmen feel in regard to having your fine Arena standing practically idle during the summer months.

You mention that volleyball and badminton would be two lines of sport

even through Family Allowances. We are looking after 222,584 aged persons by way of pensions, and we are planning to extend these benefits in the near future to an additional 291,414 persons. Mr. M. J. Coldwell, a few months back, was denouncing that as miserably and urging wider benefits. But let that go, and let us add only the benefits for 10,617 blind persons who, obviously, must be assisted. That means a total of 4,217,036, or 85% of our estimated population for 1948, who are partially or directly subsidized. And that says nothing of price supports for the farm, freight subsidies for large sections, subsidies for certain classes of employed persons, subsidies for housing and various other forms of support.

Behind these direct, and less direct, beneficiaries there is a total work force of just under five million—a group of personal income tax payers of less than half that number—the main providers.

What do they provide? Effort, of course, which represents income that may be taxed. And what are the chief returns? The tax from the income of individuals; \$611,500,000; from corporations, \$538,500,000; from the sales tax \$415,000,000. Total them and you have \$1,570 million, or a little better than half of the 2,400 million budget that Mr. Abbott warned was not likely to decline. It is easy to say that we will meet new outgo by added taxation. But how long can one quarter of the people pay such a large part of such extraordinary expenditures? It must be accepted that people who are so constantly demanding increasing and enlarging subsidies must learn to bear a larger part of the costs of that and our increasing burdens.

That could use the Arena during summer and in this regard, I would like to suggest the boys get busy and institute BOX LACROSSE. The old field lacrosse used to field twelve men but box lacrosse uses about the same number of players as hockey which cuts travelling expenses to a minimum. It is a fine conditioner for hockey players and as a crowd thriller it is unsurpassed.

You could have a fine league with such teams as Wainwright, Vermilion, Vegreville, Lloydminster and Camrose. We have six teams here in the big league but there must be a dozen leagues of junior and school groups. We even have a team of boys who are all under seven years of age.

Of course it would take a year or two to get things rolling but I am sure the effort would be well worth the effort. Should any of the sports be interested, I would suggest they appoint a committee to the other towns and also send a delegation out here to Vancouver to get all the dope from the Coast players. I am sure the boys here would give you every assistance possible. Some of the prairie tourists to the coast could act as delegates and avoid your club paying out money for travelling expenses.

I realize it would take a great amount of effort to get the game going on the prairies, but if they ever intend to organize Canada's National Game, somebody has to make a start and, why not Wainwright?

Wishing yourself, your paper and your sports arena the very best, I remain

Your old friend,  
BOB DUNSMORE.

Provide or the worst; the best will save itself.  
When the clouds are seen wise men put on their cloaks.

## Special Service Fighting Force Officers Named

Canada's Special Force for the United Nations—an initial move towards an international police force—was practically in being this week.

Only a week after recruiting started, there were the required number of 5,000 men signed, sealed and practically delivered to their training depots. And the army, with the recruiting continued, to bring up the strength of recruits needed for reinforcements for the outfits that may hit Korea.

If the outfit hits Korea, it's a safe bet it will hit it with the best Canada can offer, in spirit and fighting ability. At headquarters this week, Brig. John M. Macdonald, who has taken over the job of forming the brigade group, wasn't fooling. He kept a corner eye on recruiting, but it was good enough that he could really concentrate on getting what he wanted in fighting commanders with Second World War experience.

Here were some of the men chosen from Second World War officers who volunteered in force: Lt.-Col. R. A. (Bub) Moore, D.S.O., 25, of Fort William and Ottawa. He will command the 2nd battalion of the Royal Canadian Regiment in the war, he was chief of the "Lans" Superior Regiment and remained in the permanent force.

Lt.-Col. J. R. Stone, D.S.O., 42, of Salmon Arm, B.C., a "legion" of a fighting commander. He will command the 2nd battalion of the Princess Patricia Canadian Light Infantry. In Italy he rose from private to commanding the Loyal Edmonton Regiment and also fought in northwest Europe.

Lt.-Col. Jacques Dextraze, D.S.O., 31 who was in the lumber business in Montreal. Col. Dextraze commanded the Fusiliers Mont Royal of the 2nd Division in the Second World War while still in his twenties. He will command the 2nd battalion of the Royal 22nd Regiment.

"Rocky" the new commander, had a fairly free hand in choosing his men, and he wanted them tough and experienced. Apparently he had no difficulty getting such men.

**Bumper Harvest**  
In the midst of turmoil on international and national fronts, Canada was almost hit by a bumper crop for a bountiful harvest—something Canadians could appreciate better than world conflict.

This year's wheat crop, according to estimates by the Bureau of Statistics, will reach 544,000,000 bushels. It will be the third largest crop in history. In 1948, the wheatlands produced 547,000,000 bushels and in 1945 some 557,000,000 bushels were harvested, but it was a bumper crop by any standards. Other farm products also were commanded by the bureau of statistics at levels far above last year.

It meant that Canada, if world war was to come, had a reserve of food for the sustenance of the democracies. Rail Strike  
But the government has a more pressing problem to face at home in a railway strike which ties up the entire country.

124,000,000 men are involved directly in a dispute with the two great Canadian railways over shorter hours and higher wages.

The unions sought a 40-hour week

## B. C. Foresters Urge Re-Seeding Program

New Westminster, B.C.—British Columbia's timber resources won't last long unless a full-scale re-seeding program is launched, R. D. Gregor, chief instructor of Green Timber Forestry School at nearby Surrey said here. Mr. Gregor told a service club that

with the same take-home pay as its members have been getting for the present 48-hour week, plus an hourly increase of seven cents for the 15 international unions involved and 10 cents for the all-Canadian group.

The companies' "final" offer was for a 44-hour week with the same take-home pay, plus an acknowledgement that the 40-hour week should be put into effect at "the appropriate time." The unions objected to the indefinite question of what might be "appropriate."

To meet this crisis, the government appointed Dr. W. A. Mackintosh, vice-principal of Queen's University at Kingston, Ont., to act as mediator. The union and management accepted the mediation proposal but the union refused to accept the government's appeal to postpone strike action for a month.

Government mediation was necessary in a similar crisis in 1945, when a compromise was reached at 17 cents an hour a few hours before the strike was scheduled to go into effect. The unions had asked 25 cents an hour.

Meanwhile, transport and communications companies are drawing up emergency service plans to meet the strike.

"It is largely up to the forest ranger to see that re-seeding operations are carried out successfully."

"Since some 5,000,000,000 feet of timber is cut from B.C.'s forests each year, we need every ranger and forest worker we can get to aid the Forestry Department in re-seeding operations. It may take up to 150 years to replace areas already logged."

"Civilizations have vanished from the face of the earth through the maltreatment of forest land and since the total mature forest stand now is approximately 180,000,000,000 feet, and more than one per cent of this is taken out each year, it won't take long to divide that stock unless we really work."

The Green Timber School opened in 1944, can graduate 50 skilled rangers every two years. There are some 90 rangers in B.C.

## NEWS NOTES

**from your**  
**Dist. Home Economist**  
Miss Bernice Reed  
Wainwright, Alberta

### Care of Late Cut Flowers

This is rather late in the season to discuss cut flowers, but there are still asters, marigolds and some other flowers blooming. Although all flowers are very fragile they can be made to last quite long by proper cutting and hardening.

The best time to cut flowers is when the stems are filled with moisture. This is early in the morning, or in the evening, but never in the heat of day. Cut each stem as long as possible with a sharp knife, using a long, diagonal stroke. Slices tend to bruise the stem.

Plunge the stem into a bucket of water as soon as it is cut. If this is not done, the cut stem begins to draw in

air which will form 'blocks' to prevent the sucking in of moisture when the stem finally does reach water. The result will be a droopy flower which will soon lay down and die.

Hardening is the proper treatment of the stem so that it can drink up more moisture and keep the blossoms fresh longer. The hardening treatment varies with the type of stem. Flowers such as marigolds, cornflowers or asters need only to be plunged into cold water at once. Bulbous flowers, that is tulips, lilies and gladioli, should be submerged in water with the stem, right up to the flower head, covered. Keep them in a cool, dark place for a few hours before arranging.

With these precautions your remaining cut flowers will last longer for your enjoyment.

**Alberta Oranges**  
Now that we have had our first frost and the leaves are starting to turn color, the time has come to pick your 'Alberta Oranges'. You have probably guessed by now that I mean rose hips. The ripe hips that are vivid red and slightly soft are best, though green hips are also rich in Vitamin C. Vitamin C is so abundant in rose hips that

## ONE CALF, TWO APPETITES

—Central Press Canadian  
"Oscar," a two-month-old calf bought by an animal collector is currently being shown in Paris. "Oscar" has two heads and four eyes in one otherwise normal body. The left brain controls the calf's hind quarters while the right brain commands the front. Oscar is not expected to live since he is unable to chew any solid food. He is shown being fed milk from two bottles. In the course of a day Oscar drinks 2½ gallons of milk.

three of them contain as much of the vitamin as one medium-sized orange. Because they are free for the picking, and are abundant this year, you will want to gather yours soon.

For cooking directions write or call in for a pamphlet available called Wild Rose Hips. In this pamphlet are recipes for bread, cookies, hermits, muffins, rolls and jams and jelly using rose hips.

The answer to last week's question—to substitute one cup of butter with lard or shortening—is: you would use ¾ cup of lard or shortening and add ¼ cup of liquid. That is because butter contains approximately ¼ cup of water per cup of butter.

The question for next week is: How many teaspoonsful are there in one tablespoonful?

## Soil Conservation

G. R. Sterling, Supervisor of Soil Conservation, advises that heavy rains of the past few weeks have resulted in considerable soil erosion. How this problem is being met, he says, was strikingly apparent on neighbouring farms visited recently in an area in central Alberta.

The same waterway crossed two farms. On one there was a gully from which some of the best soil in the province had been washed away to a depth of six feet. On the other, the runway consisted of a gentle depression on which a thriving crop of hay was growing. A striking example of contrast in soil conservation conspicuousness.

Water erosion, says Mr. Sterling, may occur slowly or rapidly, depending on the nature and susceptibility of the soil. When first signs are noticed, the damage can be repaired readily; if neglected, erosion means time, worry, and expense. So long as the gully can be crossed with a tractor, the ordinary farm implements may be used for filling. Action, however, should be taken long before the gully makes headway. If waterways on cultivated fields are grazed down early, they provide a profitable source of feed; allow for easy and economical cultivation of the field; and indicate recognition on the part of the owner or operator of that primary responsibility—soil conservation.

## Swine Care

A. J. Charnecki, Livestock Supervisor, Alberta Department of Agriculture, points out that our hog troubles in the fall usually begin with a break in the weather. Rapid changes in temperature, accompanied by cold winds, very often cause sickness from colds and similar complaints.

To prevent losses due to sudden climatic changes, sleeping quarters for swine should be repaired and bedding provided while the weather is still good. For brood sows due to farrow this fall, care should be taken that the bedding is fairly free from Canada thistles. The

## Bottled Sunshine For Swine Health

In swine management the feeding of cod-liver oil or sucking and growing pigs will do much to reduce losses from colds, pneumonia and similar ailments, says A. J. Charnecki, Livestock Supervisor, Alberta Department of Agriculture. Practical hog growers today make full use of this bottled sunshine. They insist that the few cents expended pays big dividends.

Cod-liver oil should be fed at the rate of 1 teaspoonful per day for each growing pig until it has reached a weight of 100 pounds, says Mr. Charnecki. Where commercial supplements are used, feeding of cod-liver oil may be reduced, and completely cut-off when the pigs have reached a weight of 60 or 70 pounds. It may be fed daily to sucking pigs after they have become well accustomed to creep feeding. Prior to that time, 4 or 5 drops of concentrated cod-liver oil may be dropped in the mouth of the sucking pig at the time of treatment with reduced iron on the 2nd, 10th and 15th day after birth. Be careful not to overdose with reduced iron. The proper dose is one-half the amount of reduced iron that will lie flat on a dime to the thickness of the dime.

## Use D.D.T. Now

To combat the plague of houseflies so prevalent at this time of year, D.D.T. offers a most effective and economical weapon, says W. Lobay, Supervisor of Crop Protection. Mr. Lobay warns, however, that the right form of D.D.T. must be used for the purpose intended and the poisonous properties of the chemical kept in mind.

The most important factor in any fly control program is sanitation. Yards kept free from manure piles, removal of old stack bottoms, removal of feed and other rubbish from under feed racks, and proper disposal of garbage—all make for better and cleaner living and prevention of fly development. Despite every effort to prevent fly breeding there will be some survivors. This makes action necessary against the flies themselves. The use of D.D.T. as a spray is the solution to this problem.

Application of a residual form of D.D.T. (wettable form) is recommended for surfaces where insects rest or crawl, since the deposit remains effective for several weeks. One thorough application now may be all that is required for this season. The white deposit shows up on coloured surfaces, so use with care around the home.

Keep D.D.T. away from food and drinking water both in the house and in the barn, warns Mr. Lobay. Keep thistles get into the sow's udder and nipples, and cause intense discomfort when suckling her pigs. In some areas considerable losses in new born pigs have been reported from this cause.

## Pasture For The Dairy Herd

In any plans for pasture improvement, proper management is essential. Both over-grazing and under-grazing, should be avoided, says R. P. Dixon, Supervisor of Dairy Improvement, Alberta Department of Agriculture. If under-grazed, the plants mature and become unpalatable and of low nutritive value. Over-grazing reduces the yield and weakens the plants.

Even when the pasture is properly managed, stock will graze unevenly and some of the grass will mature. Mowing these areas will get rid of the old grass and encourage new growth. Cattle will not graze the rings of grass around piles of droppings in the pasture, so in heavily stocked pastures it is wise to harrow the field occasionally. For effective use of pasture, provide a good supply of water and shade. Stock on good pasture will spend considerable time in the shade if it is available. To conserve fertility have the shade trees at the top of the slope instead of at the bottom.

Another point worth considering is that of rotation or alternate grazing. Under this system there are two or more separate fields which are pastured in succession. After one field is grazed down the animals are removed and the forage allowed to grow to a height of four to six inches before it is grazed again. The ideal system of rotation is to have four fields and to divide the herd into two groups. The first group, consisting of the cows in milk, is pastured first on each plot in succession. The dry cows and heifers follow the milking herd to complete the grazing. With this system of pasture management liberal fertilization will increase yields very materially.

## STUDYING THE SYMPTOMS

A cold which begins with chilliness followed by fever and aching of the joints, is not just a common cold. It may be influenza or, in children, the beginning of one of the more serious contagious diseases. In all such cases the family physician should be consulted at once.

D.D.T. out of reach of children and animals. At all times follow the directions and heed the suggestions on the container. They are there for your protection.

## Time Out FOR Laughs

Man wants but little here below, but even that takes a lot of dough.

Guessing Hostess: "You know I have had such a great deal about you."

M.P.: "Possibly, but you can't prove anything."

He: "Can you beat it?"

She: "What now?"

He: "They sold me this stuff on the pay-as-you-can plan, and now they insist that I pay when I can't."

## OVERABUNDANCE SPELLS LOSS TO FARMERS.

—Central Press Canadian  
While housewives are complaining about the high price of vegetables, farmers at Holland Marsh, Ont., are suffering from falling prices in the worst market in the farming community's history. These cabbage carried by Mary Hays, were sold wholesale for 4½ cents. At prices like this farmers say they cannot continue. Overabundance of garden crops elsewhere, they say, has ruined their usual market outlets.

**GRACE UNITED CHURCH**

Sunday, September 3rd, 1950

11 a.m. Morning Worship Service: "KEEPERS OF THE SPRINGS" (Are we amongst those who are keeping pure the sources of life's springs?) Children's story: "Law Starrett's Lesson"

NO SUNDAY SCHOOL—But if you want credit for the "Twelve Month's Attendance" plan for September, you must attend the FOUR Sundays.

7:30 p.m. Evening Worship Service: "DAILY BREAD"

(What are the basic spiritual and moral laws of God with respect to bread?) Grace Church extends a cordial welcome to all.

(Sunday, September 17th, will be observed as "Bible Day". 11 a.m., a combined Church and Sunday School service; the regular rules with respect to the "Twelve Month's Attendance" plan begin with this service, absence will mean losing all credits established to date).

REV. M. DOBSON, P.A. Minister.

If the best man's faults were written on his forehead, he would wear his hat down over his eyes.

A fault denied is twice committed.

### Douglas, Isle Of Man

By Elizabeth Richmond

Douglas is the capital of the Isle of Man which, 22 miles long and 12 miles wide, is set in the Irish Sea. The pleasure boats take three-and-a-half hours from the port of Liverpool, in the north of England, to reach Douglas which has a deep-water harbour. There is an air service.

In the last 100 years, Douglas has grown into a popular holiday resort with a spacious promenade which curves round a crescent-shaped bay. An unusual castellated tower is on a rock out at sea. Known as "The Tower of Refuge" it was built in 1884 to afford

## Nelson Column Lion Is To Get New Legs

London — Britain's Ministry of Works plans to amputate the legs of Leo, one of the four bronze lions at the foot of the Nelson Column in Trafalgar Square.

Leo, guardian of the port quarter of the victor of Trafalgar, was injured by a German bomb during the war. His new legs will be made from plaster casts taken from one of his three

haughty companions by an 18-year-old Oxford craftsman, Donald Straight.

The lions were designed by the late Sir Edwin Landseer in 1867, and have long been favorite resting 'spots' for Trafalgar Square's pigeons and the people who like to feed them.

Be true to your word, your work, and your friend.

No man who loves applause more than the truth will add much to the world's progress.

## NEWS & VIEWS OF TOWN AND DISTRICT

**BORN**—To Mr. and Mrs. E. Courchesne of Chaurin, at the Wainwright Municipal Hospital on August 21st, a boy.

**BORN**—To Mr. and Mrs. A. Rutherford of Wainwright, at the Wainwright Municipal Hospital, on August 21st, a girl.

Rev. and Mrs. M. Debon arrived home Monday night after a holiday spent at the coast.

Mr. and Mrs. D. E. Walker moved to the city on Monday on a business trip.

Mrs. Jack Slater of Lloydminster visited at the home of Mr. and Mrs. Bert Cameron for a few days last week.

Mr. and Mrs. D. Genderton, accompanied by Miss Doris Bowman, all of Edmonton, spent the week end visiting with Mr. and Mrs. E. Genderton.

Sylvia McNally is back to her duties at the Wainwright Pharmacy after her annual holidays spent at points south.

Miss Ada Gardiner who is employed at the Torfild hospital spent a few days in town last week visiting with her sisters.

Mrs. H. C. Wallace returned home last week after an extended holiday spent visiting with her son and daughter-in-law, Dr. and Mrs. B. Wallace in St. Anne de Bellevue and other relatives in the States.

Mrs. Greer McCuskey was in the city for a short time last week.

Mrs. Walter Spence (nee Elsie Harris) of Vancouver arrived recently to visit with her brothers, Ken and Chris Harris and other relatives in the district.

Dr. J. D. Wallace, Dr. J. Asch and John Davidson motored to the city last Monday to take in the football game between Montreal and Edmonton.

George Reynolds motored to the city Saturday to meet Mrs. Reynolds who had just returned from California, where she had been visiting relatives.

Mr. and Mrs. L. B. Adams have returned home after a holiday spent in Edmonton and other points.

Mrs. Holte, one of our local teachers, has returned home after her summer holidays.

Lefroy Carl is on his annual holiday's these days from his duties at Reynolds' Garage.

Ernest Cole who has been employed at the local Bank of Montreal, left at the week-end for Myram where he has been transferred. Mr. Hugh McKinnon will take his place.

Mr. and Mrs. J. J. Robblee and family are home again after their annual holiday.

Mr. and Mrs. J. Humphries returned home recently driving a new Chev.

Miss Eleanor Wade of Edmonton is visiting at the home of Mr. and Mrs. H. Smart for a short time.

Mr. and Mrs. J. Davidson were visitors to Edmonton on Monday.

Miss Joan Craig and Miss Margaret Morgan of Edmonton motored from Edmonton to visit with Mr. and Mrs. Lev. Harlow and trying out a brand new Prefect car.

Mr. Richards and daughter from North Battleford arrived on Sunday night to spend a few days visiting with Mr. and Mrs. P. T. Haywood.

Mrs. R. V. Walters left recently to visit with her family in Toronto.

Mr. and Mrs. Dave Veltch of Custer, B.C. are visiting friends and relatives in the Wainwright and Irma districts.

On Sunday at there was a family gathering at the home of Mr. and Mrs. J. T. Veltch, when the three brothers, Blair, Jack and Dave were together for the first time in over twenty-five years. Seventeen Veltchs answered the roll call.

Mr. Allan Kingston has arrived from Quebec driving a new Studebaker car, which he purchased in Ontario.

Lloyd Boyd was the lucky winner of first prize in the stamp collection award entered at the Vermilion Agricultural Fair.

Vera Simmeson is in hospital at Wainwright suffering from burns received when a lamp was overturned at the Cecil Hiseck farm. She is reported in good condition.

Mr. and Mrs. J. Nesbitt, of Maidstone, Sask., were visitors at the May home on Sunday. They came down to take home their daughter, Pat, who had been visiting here for a time. We are sorry that we missed Mr. Nesbitt, who is editor of the Maidstone Mirror.

Mr. and Mrs. George Hayton were visitors of Wainwright a week ago.

### Building Brightness

This is a good time to brighten the inside of barns and poultry houses so that full use may be made of the limited daylight hours. Whitewash offers one of the cheapest and quickest means of doing this, and methods of making two types of whitewash are here suggested by Mr. C. A. Cheahire Extension Agricultural Engineer, Alberta Department of Agriculture.

Whitewash No. 1

(1) Add 25 pounds of hydrated lime to 4 gallons of boiling water, stirring vigorously.

(2) Into 1 gallon of water and 2 gallons of skimmed milk mix 5 pounds of salt, ½ pound of alum, 5 pounds of Portland cement and ¼ tin of lye.

(3) Mix solutions (1) and (2) together when cold, stirring vigorously.

Whitewash No. 2

(1) Add 1 sack of hydrated lime to 5 or 6 gallons of water.

(2) To this add 2 gallons of flour paste made as follows:

(a) Mix dry flour and cold water to a stiff paste.

(b) Add boiling water, stirring vigorously, until the paste has a thick creamy consistency.

Both of these whitewashes are resistant to rubbing off and either may be applied by brush or sprayer. The whitewash should be applied in a thin, even coat, and not "brushed out". One gallon will cover approximately 225 square feet. To make the whitewash disinfestant, add from one to two quarts of carbolic acid to either of the above formulas. The amount of carbolic acid will be determined by the strength of disinfectant required.

Luck is always against the man who depends upon it.

Let not the man be trusted that hath no music in his soul.

Let not the man be trusted that hath no music in his soul.

Let not the man be trusted that hath no music in his soul.

Let not the man be trusted that hath no music in his soul.

Let not the man be trusted that hath no music in his soul.

We see Mr. and Mrs. H. Heister, of the Arland district in Wainwright on Tuesday morning.

We shouldn't brag... but last week when we were visiting Edmonton, 74 editor became a taxpayer of that growing metropolis. Yep! We copied a couple of those little red tickets they leave on your car when the meter says "Violation." Incidentally we have an idea might not prove popular. Why does the city not raffie off a car with every so many tickets. In that way the unfortunate offender would have a chance to get something for his money.

We hear that Dick Hissett had the misfortune to overturn his car early this week. No injuries reported.

I was in a small tavern in northern Michigan one night when the lights went off for an instant. People around me chuckled, and someone called out, "Go on home, Tom."

From a far corner an old fellow rose and stalked off, grumbling. The man on my left explained: "Tom and his

wife own the dynamo up the river, and when she figure he's been here long enough she just turns off the power. Us townfolk always see to it that he leaves right away, because the next time the lights go off they don't come back on."

## Jelly Making Can Be A Joy

Twinkling rows of jewel-coloured glasses of jelly on the shelf mean year round enjoyment for the family and their appreciation is the reward of the successful jelly maker.

Crabapples, grapes and plums so blue, Make sparkling jellies of diverse hue, Fill the jars and pack the shelf.

Winter joy for family and self. The home economists of the Consumer Section, Canada Department of Agriculture, say that it is easy to make jelly that is clear, sparkling and tender with the rich, full flavour of sun-ripened fruit . . . provided you know the rules. Good jellies, however, cannot be made from all fruit juices by "rule o' thumb". Jelly making is an art, founded on scientific principles.

To make perfect jelly, pectin, acid, sugar and water must be in the right proportions. Pectin, the jelly-making substance, and acid are found in the fruits in varying amounts. The amount of sugar and water to be added must be accurately determined. Food scientists tell us that the addition of sugar to a fruit juice, rich in pectin causes the jelly to form an intricate network depends on the amount of pectin. The addition of too much water or too much sugar, weakens the network and the syrup is not held in firmly enough to form a true jelly. If there is too much acid or if not enough sugar has been added, the jelly will be tough, because acid strengthens the pectin network.

Crabapples which are not fully ripe contain a large amount of pectin, so should be completely covered with water. Grapes and sour plums have a little less pectin than the crab, so water enough to come just below the top layer of prepared fruit is sufficient. Simmer the fruit and water in a covered kettle until the fruit is soft and mushy, crushing during cooking. Then pour the hot cooked fruit into a moistened jelly bag made of factory cotton, flannel or several thicknesses of fine cheesecloth. Hang up over a bowl and allow to drain until dripping ceases. Squeezing the bag increases the quantity of juice, but the jelly will not be so clear.

Work with small amounts of the extracted juice at a time. . . not more than 8 cups, measuring each lot of juice accurately to determine the amount of sugar to be added after boiling. Boil the juice, uncovered, in a broad saucepan for just 3 minutes. Remove the saucepan from the heat and test for pectin. If a clot does not form continue boiling, testing frequently, until pectin test is satisfactory.

The pectin test consists of measuring 1 teaspoon of fruit juice and 1 teaspoon of rubbing alcohol into a small dish and blending them together. If after standing 10 seconds a jelly like mass has formed, the juice contains sufficient pectin. Sugar may then be added. Do not taste this mixture - rubbing alcohol is poisonous.

Measure sugar, allowing  $\frac{1}{2}$  cup sugar for each cup of extracted juice, except when a heavy solid clot forms when pectin test is made at the end of the 3-minute boiling period. This heavy clot indicates that the juice is so rich in pectin that 1 cup of sugar for each cup of extracted juice should be used. Add measured sugar slowly to juice. Boil briskly, uncovered, remove scum as it forms.

To test when jelly is done, dip up the boiling hot syrup with a metal spoon, holding well above kettle, and allow it

## Longer Skirts Feature Latest Paris Fashions

Paris — Skirts, star attraction of the current Paris collections, are good inch longer than last season.

The 1951 dress girl of Paris contrived all girl with plenty of bustom and bustles.

She is tall and willowy with a graceful neck topped by a neat, tiny head and longer hair. Dress design, rather than padding, widens her shoulders. A well-rounded bust line leads to a nipped-in waist. The curves continue to a naturally rounded hip that still remains slender in contrast to the shoulder line.

The short evening dress now is being used as a little cabaret dress. For the dinner hour, pencil-slim, ankle-length gowns have taken over. Full gowns are still ground length and room filling. Balmesaga takes top honors among the fashion exhibitors. His suits are Paris classics. This season news is found in exciting peluma, which give the effect of slipping in in back while front interest is sustained by stiffened basques that curve gently from a snug waist.

The type of dresses "Mrs. Every-body" longs for was shown by Jacques Fath. Skirts fell gracefully from the knee. Soft, deep, draped necklines, style-named "magpie," look wonderful at the bridge table. Fath does a similar collar in fur; typical of this is a pillar lined ombre jersey entirely puffed at shoulder yoke.

The collar set off his mannequins' new hair style — "Canaats" one immediately thinks of the queen of a pack of playing cards. Long hair is worn with no parting, ending in a flat roll over the ears.

Let hot juice stand in kettle for about 1 minute and remove half of scum with a cold fork or spoon. Pour into hot, sterilized jelly glasses, filling to within  $\frac{1}{4}$  inch of the top. Using a slightly moistened clean cloth, carefully remove any jelly clinging to inside of jelly glass above the jelly level.

Let stand until partially set, then pour a thin layer of hot, melted paraffin wax to completely cover the jelly and leave until hardened. Then add a second layer of hot melted wax, rotating the jar so that the wax will adhere to the glass to form a close seal. Cover with paper or metal lid and store in a cool, dry place.

Harvest Jelly  
2 quarts crab or snow apples  
1 quart cranberries  
5 quinces  
Water  
Sugar

Wash apples and quinces and remove stem and blossom ends. Cut in quarters. Cover with cold water and cook until tender. Wash cranberries and cook in one quart water until tender. Pour apples, quinces and cranberries into jelly bag and let drain overnight. Measure juice. Boil 3 minutes. Test for pectin. Add sugar ( $\frac{1}{2}$  cup sugar to 1 cup juice). Boil to 220 degrees F. or until syrup sheets from spoon about 10 minutes. Remove scum, pour into sterilized glasses. Seal.

## PRINCE CHARLES GETS PLAYMATE, SALUTES HAIL BIRTH OF PRINCESS

Thousands of persons maintained watch on Clarence House, London, in anticipation of the birth of a child to Princess Elizabeth. News that a daughter had been born was greeted by cheers and 21-gun salutes in Britain and throughout the empire.

Prince Charles, second in line for the British throne, seems somewhat bewildered as he starts out for a ride with his nurse. He now has a playmate, a baby sister with whom to share the spotlight.

Fath favors brunettes and proposes pale make-up with dark lips and nails to complement his ballet look.

"Grand Duchesse" impression is given by his fur-trimmed or lined coats, suits and dresses. Even in the daytime picture, a grey flannel, seven-eighths length suit is trimmed with a white mink shawl collar and deep cuffs; the coat is lined with grey and white striped jersey matching the blouse.

The fur is carried to upper arm bracelets which hold ground-length stoles in place. This is highlighted on an ensemble he calls "Red Shoes". A floor-length pencil-slim skirt of wine red satin is complemented with a matching stole faced in a dull sapphire blue. The new note in the stole was the harem drape in the back which passes through the wide mink bracelets.

The oblique line—a fastening from left shoulder to right hem—is the signature of Dior's collection.

Dior renews the "new look" in his suits with nipped-in waistslines but brings them up-to-date with a slim skirt. An interesting treatment is to face the pelum and revers in a con-

## Packing Bee Hives For Winter

By this time, beekeepers who intend to winter bees will have chosen their colonies with care, and the bees will be settling down and forming their winter nests. Towards the middle of October the hives will have to be packed. W. G. McAlister, Provincial Apiarist, Alberta Department of Agriculture, advises that in packing, a cardboard carton may be used that allows for three or four inches of shavings all around the hive and ten or twelve inches on top. Tar paper or a wooden case will produce the same results as cardboard boxes. It is the thickness of insulation at the sides and top that matters. Shavings have proved very satisfactory but the use of straw is considered almost as good.

To pack the hive, the hive cover should be removed and a piece of burlap or sack used over the frames. The cardboard box is then slipped over the hive and the shavings poured in. The shavings should be firm but not tight around the hive. Next, a top entrance is put in that slides under the burlap above the frames. This top entrance is a tunnel about four inches wide and half an inch high, and long enough to reach from the front of the cardboard carton to the center of the hive. The regular hive cover is then placed on the carton, but propped up with a stick so that air can circulate over the shavings all the time.

The way to be safe is to feel secure.

## Cutworm Control

The month of August and the first half of September is a critical period in so far as the control of the Pale Western Cutworm is concerned. In areas where cutworms were in evidence last spring, summer-fallow fields should be left undisturbed by either machinery or livestock during this period. The crust which forms on the surface of the fields should not be broken for it prevents the cutworm moths from laying their eggs.

We know not which stone the scorpions lurk under.

Full-skirted dresses are one of the outstanding characteristics of this daring designer's line. Dior, in a year consecrated to the slim sheath, reaffirms his belief in the more feminine look of the full skirt. He tops this with tunis coats, cut on redingote lines with flaring three-quarter or seven-eighths length flaring skirts.

## NOTICE

WAINWRIGHT MUNICIPAL HOSPITAL DISTRICT, No. 17

The instructions given below must be followed by any patient from the Wainwright Municipal Hospital District who is hospitalized in another hospital and wishes to have part of the charges paid by the Wainwright Hospital District.

Payments will be made only for the hospitalization of ratepayers or their dependants . . . not for non-ratepayers . . . and only in cases of emergency or cases specifically referred to another hospital by the Doctor.

Form 80 must be completed in triplicate by the hospital concerned and forwarded to the Secretary of the Wainwright Municipal Hospital.

A letter from the doctor treating the case must also be sent, stating the reason for which the patient was hospitalized.

A receipt must be forwarded showing the account paid in full.

These three items must be forwarded to the Secretary of the Wainwright Municipal Hospital District, at Wainwright, within 7 days.

By Order of the Board of Trustees  
Wainwright Municipal Hospital Dist.

## Indian Industries Forge Ahead

**INCREASED PRODUCTION OF COAL, STEEL AND CEMENT**  
Industrial production in India in 1949-50 generally showed an upward trend. There was striking improvement in a number of important industries—like coal, steel, cement, heavy chemicals and paper. There was, however, a fall in two industries—cotton textiles and jute manufactures. In both cases the limiting factor was the supply of raw materials at reasonable prices.

One of the main causes of the brighter industrial situation was the assistance given by the Government to private enterprise. As early as October, 1948, the Government of India reduced the import duties on machinery and certain industrial raw materials. The rules regulating depreciation allowances were liberalized. New industrial undertakings commencing production in the next three years were given exemption from income tax for the first five years up to a limit of six per cent of their capital.

As a result of these measures the flow of capital goods into India gathered momentum. Before the war, average imports of machinery amounted to Rs. 200,000,000 a year. In 1947-48 it stood at Rs. 584,000,000, increasing to Rs. 811,000,000 in 1948-49 and Rs. 1,055,000,000 in 1949-50. Even allowing for the present increased cost of machinery, imports represent a substantial improvement over the pre-war years.

Two other factors have assisted the increase in production. The first is the marketing improvement in the transport situation. The second is the improvement in relations between labour and management. Industrial disputes in 1949 declined by over 43 per cent as compared to the previous year. There was also an appreciable fall in the number of man-days lost.

Comparative production figures for some of the major industries in 1948 and 1949 are given below.

	1948	1949
Coal - Tons ...	22,320,000	31,450,000
Steel - Tons ...	184,000	322,000
Cement - Tons ...	1,540,000	2,060,000
Paper - Tons ...	94,000	103,000
<b>Cotton Textiles</b>		
Cloth - Yds. 43½"	2,901,757,000	3,901,757,000
Yard - lbs.	1,447,072,000	1,858,287,000

After partition there has been a shortage of cotton for the Indian textile industry. Arrangements have been made to import about one million bales of cotton this year. Active steps have also been taken to increase production of cotton. These include distribution of improved seeds, inter-cropping of cotton with other crops, extension of irrigation facilities, selection of better land and removal of legislative and executive restrictions on the growing of cotton. As a further incentive it has been decided to raise the cotton price of the 1949-50 crop by Rs. 150/- per candy. As a result of these measures it is estimated that the cotton production in 1950-51 will go up to 5,400,000 bales against the current year's output of about 2,700,000 bales.

**Cloth prices reduced**  
Prices of cotton textiles were revised from February 1950, according to the system of periodical revision suggested by the Tariff Board. Cotton textile prices are to be based on the statutory ceiling price for different varieties of Indian cotton of the current year's crop and the actual prices of imported cotton. As the higher prices paid for imported cotton this year would have led to some increase in the price of fine and super-fine cloth, it was decided that simultaneous revision of the ex-manuf price, the excise duty on fine cloth should be reduced from 6½ per cent to 5 per cent and that on super-fine cloth from 10 per cent to 8 per cent. The result was that there was actually a slight reduction in the prices of cloth to the consumer.

Prices were again revised from May 1, 1950. There is no change in the prices of coarse and medium cloth, but a small increase ranging from ½ per cent to 1½ per cent in the case of fine cloth and a reduction of 2 to 3 per cent for super-fine cloth.

Devaluation of the Indian rupee has greatly assisted export of cotton textiles, which jumped from 241,000,000 yards in 1948-49 to 690,000,000 yards in 1949-50. A quota of 1,150,000,000 yards has been fixed for the period September 1949 to December 1950. In addition free exports of fine and super-fine cloth for the period February-December 1950 have been permitted. Export of handloom cloth is also freely allowed.

Ten more mills with 107,000 spindles came into operation in 1949 and 12 new mills are in the process of construction. When these mills go into full production the output of cloth is expected to increase substantially.

**Iron and Steel**  
Production of finished steel in 1949 was about 225,000 tons as against 184,000 tons in 1948. Besides, India was able to import 400,000 tons of steel, mainly from the U.S.A., Belgium, Britain and Canada. The railways obtained their full requirements of 231,371 tons, organized industries 411,000 tons and small industries and the public 202,000 tons. There was a progressive increase in the supply of steel for agriculture.

## Many Visitors In Fram District

Congratulations to Mrs. and Mr. W. J. Graham on the birth of a son on August 18th at the Lloyd hospital.

Miss Eileen Graham remained for summer school to spend the remainder of her holidays at home.

Miss Barbara McCormack returned to Lloyd after spending her holidays in Edmonton and Banff.

John Ostrom of Lloyd spent a few days with the Hon. Ostrom family and Janice Mitchell in Mondak.

Mrs. R. Ostrom and Donna were Sunday guests at the home of Mr. and Mrs. H. Ostrom.

Miss Helen Searle of Lathburn spent a few days with Paty Pritchett.

Mr. and Mrs. J. S. Palmer entertained friends from Yawn.

Friends of Mr. and Mrs. Carl Sheenstead (nee Dorothy Coe) will be pleased to hear they are proud parents of a baby girl born on August 18 at Lloyd hospital.

Mr. and Mrs. Walter Collins and Mr. and Mrs. C. Gabrielson were Sunday guests at the home of Mr. and Mrs. C. Reichelt.

## Loyalty School "United Nations" Teacher Released

REID DEER—Gordon G. Fellows, teacher who guided a party of students from Loyalty rural school near here on a trip to United Nations headquarters at Lake Success, no longer is on staff of the Red Deer school division. This was announced Friday by I. A. Thurber, superintendent of the division.

Announcement follows receipt by the divisional board of a protest from residents of the Loyalty district, expressing disapproval of the trip and seeking replacement of teachers.

Based on the protest was said to be Mr. Fellows' assignment of the Loyalty school in a general sense. Chief objection voiced was to the school's stressing of social studies to the exclusion of routine subjects.

Mr. Fellows taught social studies partly by using transcripts of United Nations security council meetings. Resultant publicity led to the recent trip to a security council session and to the White House at Washington.

Believed now to be on the staff of another school district, Mr. Fellows is said to be completing arrangements for a film to be based on his teaching system. It would be produced in Hollywood.

At the school board's last meeting, a delegation led by F. Hopple launched a protest against Mr. Fellows' supervision of general classes at the Loyalty school.

Mr. Thurber said Mr. Fellows, from British Columbia, had no Alberta teachers' certificate.

**Due to mail delays, Paradise Valley News has not arrived at time of going to press. Should this arrive today it will be carried in the Wainwright Section.**

## Maynard-Manning Represent Alberta At Conference

Premier Manning and Hon. Lucien Maynard will be two of the Alberta representatives next month at the dominion-provincial conference in Quebec City.

At present Mr. Manning is on holidays at the Pacific Coast and Mr. Maynard has just returned from two meetings in eastern Canada. The meetings were of Canadian attorney-generals, and of provincial representatives on Canadian defence. Both were held in Ottawa. Hon. C. E. Gerhart, Alberta minister of municipal affairs, also was present at the defence meeting.

The dominion-provincial conference will be held on Sept. 25.

—Edmonton Journal

## Grain Hauled Long Distances In North Country

Walter Johnson, agent for United Grain Growers Ltd. at Grimsby, Alberta, established a grain handling record for his company when total deliveries for the current crop year amounted to 555,456 bushels.

Interviewed recently when returning from a motor trip with his family, Mr. Johnson reported some interesting facts which contributed to his record handling. Grimsby is located in the Peace River block some 450 miles north west of Edmonton. It lies at the junction of the new McKenzie Highway which runs to Hay River 245 miles north and serves the Yellowknife area on the north shore of Great Slave Lake. The last three loads of grain delivered late in July were trucked a distance of 280 miles to Grimsby—from a point 40 miles north of Fort Vermilion. Some exceptional loads are hauled by the truckers. Using semi-trailers wheat loads frequently exceed 500 bushels while a single load of oats was hauled which weighed the equivalent of 800 bushels.

Trucking rates for the distances and loads hauled are of course beyond comparison with similar charges in settled communities. Farmers have paid as high as 40¢ per bushel to transport their grain to the elevator. While the highway serving this territory and what may be termed one of Canada's last frontiers is generally in good condition, grain producers are not always fortunate in the roads serving their farmsteads. One farmer who hauls to Grimsby is located forty miles from the nearest graded road. Currently he has 300 acres in crop.

Ed Johnson (no relation to Walter) is the assistant agent at Grimsby and shares equally in the desired credit for the record handling. The Grimsby elevator is under the supervision of travelling superintendent D. J. (Doug) Burch who resides in Grande Prairie.

**Don't Burn The Straw**  
The arid windy spell of last spring brought home to many farmers the advantages of truck cover, but the lesson seems to have been forgotten already. Too many people are burning combine straw and much of their standing stubble. This valuable material should be saved by proper use of a one-way disc blade or cultivator, says C. H. Cheshire, Extension Agricultural Engineer, Alberta Department of Agriculture. If a straw spreader has been used on the combine there should be little difficulty in working the soil either through or under this mulch. The benefits gained by conservation of soil and water, and by improved soil fertility and structure, make the saving of this straw essential.

Mr. Cheshire advises that to obtain the greatest benefit from this straw, the soil should be broken to a depth of two to three inches and as much of the straw as possible left on the surface. Experiments have shown that rolling hard the application of two tons of straw, per acre on the surface, plus the breaking of the soil crust, will reduce both run-off and soil erosion to about 25% of that on a bare eroded field. Although such a tremendous saving cannot be expected, every field, says Mr. Cheshire, growing improved crops can invariably be obtained simply by utilizing this valuable by-product of our grain farming.

**New Series Of Mental Health Broadcasts**  
A new radio series on Mental Health broadcast on the Dominion Network CPMN Edmonton, CPMN Calgary, on Tuesdays 8:30 - 9:00 p.m., will begin October 17th, 1950 and will proceed every week for twelve weeks. The new series is being written by Ted Allan, the well-known Montreal author and will be entitled "Life with the Robinsons".

All of the programs will relate to common everyday human relations problems of the Robinson family, their friends and their relatives. A special effort is being made to make this series interesting, entertaining and amusing. The episodes dramatized will be recognized as relating to problems in family life everywhere, and it is expected that this program will have an even greater popular appeal than "In Search of Ourselves". Each program will be followed by a mental health commentary, where a real effort will be made to provide helpful information and constructive suggestions.

Once again the Canadian Mental Health Association is cooperating closely with the CBC in the presentation of the series "In Search of Ourselves". As was the case last year, the series will consist of twelve Tuesday night programs, six of these will be a repetition of the programs produced during the first year of the series, but with new commentaries; six will comprise entirely new material. In Search of Ourselves will commence early in January 1951.

Advance notices and program notes will be available for both programs. If you desire any of these advance notices for distribution please advise us of the number required at your earliest convenience.

C. C. Evey, Director, Health Education Division.

**Stambaugh Denies Illness Report**

An Ottawa report that he was "on his way to travel by air" was exploded Friday by Senator J. W. Stambaugh, fresh from a holiday motor trip over the Hart highway in British Columbia. He was on a trout fishing trip 130 miles along the new highway west of Dawson Creek.

Senator Stambaugh, who was accompanied by Mrs. Stambaugh, cut short his holiday and started the motor trip to Edmonton, arriving here Thursday night.

The senator made arrangements Friday to leave Sunday for Ottawa by Trans-Canada Airlines. The special session will open Tuesday.

Asked about the eastern report of his illness, the senator said he had never been in better health.

Speaking of the new Hart highway, which is to link Prince George and Dawson Creek, B.C., Mr. Stambaugh said about 17 miles remain to be completed. He said much of this is difficult construction. "I doubt that the highway will be open by the fall of 1951," he said.

**GROCERIES AND MEATS for HARVEST at PARCEL'S MARKET.**

Judged by value of trade, India stands sixth and her exports used to exceed her imports.

## Cliffe Notes

(Last week)  
Congratulations to Mr. and Mrs. Hannay on the birth of a daughter on Monday, August 14th.

The Graham family Doug, Max, Roy and Mrs. Alf Wightman left for berry picking at Loon Lake.

Mr. and Mrs. Joe Bosch were visitors to Lloyd over the week-end.

## South Notes

Among those celebrating their birthdays this month are Arvid Skinner, M. Hager, D. B. Hager, Mrs. Fred Ferris, Mr. and Mrs. Lorne Ferris, Barbara Hager and John Skinner. Congratulations to all.

Weren't the northern lights remarkable on Saturday at 1 a.m. this week? The cold drove me back in to the fire—it rained but let's hope it wasn't very hard.

Barbara Hager successfully passed into Grade XI. She heard her results this week.

## Don't Burn The Straw

The arid windy spell of last spring brought home to many farmers the advantages of truck cover, but the lesson seems to have been forgotten already. Too many people are burning combine straw and much of their standing stubble. This valuable material should be saved by proper use of a one-way disc blade or cultivator, says C. H. Cheshire, Extension Agricultural Engineer, Alberta Department of Agriculture. If a straw spreader has been used on the combine there should be little difficulty in working the soil either through or under this mulch. The benefits gained by conservation of soil and water, and by improved soil fertility and structure, make the saving of this straw essential.

Mr. Cheshire advises that to obtain the greatest benefit from this straw, the soil should be broken to a depth of two to three inches and as much of the straw as possible left on the surface. Experiments have shown that rolling hard the application of two tons of straw, per acre on the surface, plus the breaking of the soil crust, will reduce both run-off and soil erosion to about 25% of that on a bare eroded field. Although such a tremendous saving cannot be expected, every field, says Mr. Cheshire, growing improved crops can invariably be obtained simply by utilizing this valuable by-product of our grain farming.

**CANADIAN VISITORS INVADe CHICAGO**

People swimming at the Chicago lakefront have come to the conclusion that Canadian geese like the Windy City as a vacation resort. A flight of 30 birds from Canada landed on the lake and immediately "took over." The group of geese shown here waddle along the shore, much to the delight of a youngster. The geese refused to comment on their eventual destination.

—Central Press Canadian

## The Little Touches

With the summer tourist season drawing to its close, many Canadian communities are taking stock of their own part in Canada's tourist industry. They are considering whether the summer has come up to expectations from the viewpoint of district resorts, whether changes and improvements in facilities should be made, and so on.

This is the time, too, when the tourists and travellers themselves decide whether their holiday trips were successful and make tentative plans for next year. The details, good and bad, of this year's jaunts still are vivid in their memory.

"That was a great spot," some will say. "Let's go back there next year and stay there for the whole two weeks."

But, of other holiday hostesses, persons who have sampled them will say: "It wasn't bad for a day or two, but next year we're heading for somewhere else."

Assuming that the areas have about the same attractions, why is it that one is recalled with enthusiasm and will have the tourists back next year while the other has fewer satisfied customers?

We put this question recently to a fellow just back from a vacation trip of several hundred miles. His answer was that it's the little things that count.

Just outside one town, I caught a big fish," he said. "I wrapped it in bark, as we were going to cook it in an hour or so, and another member of my party held it while we drove into the town. During the few minutes we stopped on the main street, a man spotted the fish and came running over with a cardboard box in which we could carry it more easily. I won't forget that town."

The traveller said well-marked roads, signs pointing to historical landmarks, added to the pleasure of his trip. He did good meals and accommodation at reasonable prices, close attention to the handling of "vacancies" and "no vacancy" signs at stopping places and, above all, friendliness and courtesy on the part of year-round residents in giving information or directions and showing an interest in the tourist's comfort and welfare.

Just such little details, the back-from-holidays man said, can make or mar a vacation visit to a region. They are the things the vacationist recalls when he makes up his mind whether to go back next year.

## German Scientists Seek Lost Atlantis

HUBBARD, Germany—Eight Germans will leave here shortly to search for Atlantis, legendary lost continent in the Atlantic.

The group, comprising geologists, physicists, archaeologists and meteorologists, is headed by Jurgen Spanuth, a 45-year-old pastor from Dordrecht, whose hobby for 30 years has been studying the history and possible location of the sunken continent.

He claims to have confirmed its approximate location recently from dusty folios.

He believes it stretches from the Atlantic Ocean to the North Sea, and he hopes to find traces of it "somewhere in the North Sea."

Spanuth has chartered the 150-ton yacht Meta and equipped it with scientific research material.

On board is a diver who claims to have developed a new diving bell in which he will search the lost world.

## SEAGOING WOLVES

Montreal—Four wolves, four raccoons and "so many chipmunks we can't count them" are sailing for a Scottish Zoo and they have the crew of their ship worried. "It's easy to handle seakick passengers," said a crew member, "but what do you do with a seakick wolf? You can't go around holding their heads. You might get a hand bitten off."

## Scientific Farm Experiments At Alberta University

When an Alberta farmer asks the Department of Agriculture or the University of Alberta for advice on his farm problems he may be sure the answer he receives includes the last word on the subject up to the day his enquiry was made.

In addition to the work done on the University farm at the southern outskirts of Edmonton, the farm itself is ringed around with laboratories in which experiments and research are conducted. The scientists who work in these laboratories—plant scientist, animal scientist, dairy scientist, soil scientist—seem to be in no fear that some day they will reach the conclusion of the whole matter. There is always something new to be learned.

The farm is one of Edmonton's beauty spots and the public is welcomed. It consists of 830 acres devoted to livestock and poultry except for the growing of feed.

The farm has 80 acres rented, but residential Edmonton has reached out almost to the farm's gates and these extra acres may at any time become city folk's homes.

Most Modern Farm

The animal and feathered population

varies. At present it consists of about 100 head of beef cattle—Angus, Short horn and Herefords—and some 75 dairy animals—Holsteins and Jerseys—besides sheep and swine. In addition to their usefulness for feeding and other experiments, the herd furnishes bulls for show and breeding purposes.

The farm is reputed to be the largest provincially-owned institution of its kind in Canada and the most up-to-date. This poultry population fluctuates considerably and rapidly, but it is thought to average about 1,500 laying hens and about 120 laying turkeys. Young birds, however, are numbered in thousands. The incubator capacity is about 25,000 eggs, one incubator alone being able to hatch as many as 2,000 at a time although only about one-third of this capacity is at present in use.

The laying room houses between 200 and 300 hens with a proportion of cockers, each in his or her own pen. Each egg immediately it is laid rolls on to a ledge outside the pen and is numbered. The eggs of each hen are placed in a separate section of the incubator and in this way the ancestry of each chick is known.

Interesting Developments

Not all animals and not all birds react in the same way to the same feeding, and what is said of one man's meat being another man's poison is little if any less applicable to the animal and bird kingdoms.

Perhaps science's most amazing development has been in the breeding of

livestock and poultry. The natural processes of reproduction have been to a great extent—in some parts of the country wholly—supplanted by artificial insemination. The process is practiced at the University farm, and some idea of its economic advantage may be gathered from the fact that a single bull which ordinarily breeds 25 to 40 calves in a lifetime can by artificial insemination breed from 200 to 500. There is an instance of a certain bovine aristocrat in Ontario who has sired some 16,000 calves in all parts of Canada.

The farm superintendent is L. B. Brooks who has been on the place for a quarter of a century. Many dirt farmers might envy Mr. Brooks his establishment, its buildings, the latest things in equipment, plenty of help and what would seem to an average farmer "unlimited" funds. But Mr. Brooks says: "A crop failure worries me as much as if my living depended on it."

## T.B. Association Staff Conference At Calgary

The annual staff conference for professional workers on the staff of the Alberta Tuberculosis Association takes place Thursday and Friday at the Palliser Hotel, Calgary. It is announced by C. Robert Dickey, general secretary of the Association.

Panel discussions of all phases of Alberta's T.B.-control program will continue through both days, with particular reference to the part the Association plays in cooperation with the national and provincial departments of health.

Taking part in the conference, besides Mr. Dickey, will be Mrs. Winifred Norquay, R.N., Miss Ethel Savich, R.N., Mrs. Olive Currie, R.N., Mrs. M. E. Whiteley, R.N., B. D. Cameron, B. E. Baxter and W. L. Alston. The sessions will also be attended by Miss Kathleen Connor, R.N., matron at Central Alberta Sanatorium, C. H. Crooks, president of the Association and G. S. Lakin, vice-president.

## PROFESSIONAL VACCINATING

There seems to be a lot of misunderstanding among livestock owners as to just why it is necessary to have a qualified veterinarian do the job of vaccinating. Well, here is the answer. Brucella abortus vaccine strain 19, is one containing live organisms and in Canada vaccines of this type are very carefully controlled. If they are carelessly used, new outbreaks of the disease could easily occur.

Makes not your stew until you have caught your hare.

## New Alberta Display At National Fair At Toronto

Alberta's new "eye-catching" display will make its first showing at the Canadian National Exhibition, Toronto, August 25 to September 9. The display is designed to show Alberta's industrial and tourist potential.

The 1950 edition of Alberta's "show-window" measures 47 feet in length. It is 15 feet high and 12 feet deep. Following the C.N.E. the display will be shown at the Royal Winter Fair, Toronto. Next summer it will appear in Alberta.

Main section of the display features an artist's drawing of Peavlo Lake, on the Banff-Jasper Highway. A very intricate lighting system helps make this year's display outstanding. When the Peavlo Lake scene is dimmed-out, a brightly illuminated model becomes visible in the background. Then a strong spotlight is focussed on the oil well, showing in rotation, agriculture, oil

natural gas, water power and other industries of Alberta.

At the left of the main section is a raised map of Alberta which indicates industrial centres and national parks. At the right is a montage of photographs concerning industry.

The Alberta Government and the power and natural gas companies co-operated to present a display at the exhibition at the Edmonton Trade Fair, Toronto during May.

The main portion of Alberta's display exhibiting at Toronto last year was shown at the Edmonton Exhibition and it will be on display at the Pacific National Exhibition, Vancouver from August 25 to September 4.

Products manufactured in Alberta are on display also at the Alberta exhibit during the various exhibitions.

## BLIND HURLER

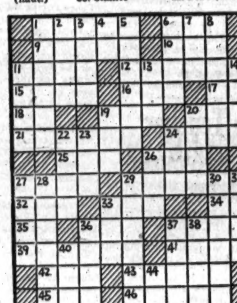

Calgary—Pitching blindfolded for his four-man team, Ed Felner of Walla Walla, Wash., recently struck out 15 batters and allowed only one scratch hit to register a 5-1 victory in a seven-inning exhibition softball game. The losers were Calgary Erics, 1949 western Canada senior champions.

## CANADA NEEDS MEN TO TRAIN AS ANTI-AIRCRAFT GUNNERS

A major requirement of Canada's defensive system today is men trained for anti-aircraft operations. Charged with the defense of vital areas, the units of the anti-aircraft units are equipped and trained in the use of modern scientific equipment—electronics, radar, radio and telephone.

There are very few more important jobs than service in an anti-aircraft unit for young men who want to make sure that Canada is well defended against any eventuality.

To enlist you must—

1. Be a Canadian citizen or British subject.
2. Be between 17 and 29 years of age.
3. Be single.
4. Meet Army test requirements.
5. Volunteer for service anywhere.

Report right away to  
No. 10 Personnel Depot, Currie Barracks, CALGARY, Alta.  
Headquarters, Western Command, Kingsway Ave., EDMONTON, Alta.

Deposits open 8 A.M. to 10 P.M. daily.

Bring certificates of age and education with you

GO ACTIVE—SERVE YOUR COUNTRY  
by strengthening Canada's Armed Forces today to build up the defenses against aggression everywhere.

Join the CANADIAN ARMY ACTIVE FORCE Now!

### United Nations Security Council Meets on Korean Situation

The 11-member United Nations Security Council is shown here during one of its meetings in August on the Korean situation. President of the Council for the month was Yakov A. Malik (center, speak-  
ing), Deputy Foreign Minister of the USSR, who returned to the horseshoe-shaped table after more than six months of absence in protest against the participation of the delegate of 'Nationalist' China.

### LOCAL NOTES

The Misses Joan and Joan Kingston returned from their holiday at the coast last week. Joan returned to the city on Sunday.

Mrs. Brewitt of Fort William is visiting her sister, Mrs. A. Sawyer.

Vera Rowley is home visiting from Three Hills.

The Legion had to fetch the films by road from Lloydminster for the week-end show.

Nick Haddowich, one time section foreman here, met with a serious car accident last week and is still in hospital.

**CAUTION IN COOKING**  
To bring all the beauty and goodness of vegetables to the table they should be cooked only until tender. Cook them in a covered pan in the shallowest possible amount of water in the shortest possible time. Vegetables should be prepared immediately before cooking as exposure to the air and long cooking destroys the valuable vitamin C content.

**LIBERTY SHORT-LIVED**  
Annapolis Royal, N.S. — Released after serving a term for forgery, La Mout E. Beaulieu was picked up again a few hours later, charged with sending a forged cheque to a national "fin" while he was in the clink.

Morris Kimball is the new Co-op manager.

Mrs. House has moved into the Pioneer house.

Mrs. Jimmy Arneson's brother from Hughenden last week. Miss Mildred Gibson stayed for a few days.

Evening services will re-commence in St. Mary's Church on Sunday, September 3rd.

### Harvesting Getting Underway In The Rosedale District

Mrs. Guy Gibson and family visited her sister Mrs. Clifford Cameron of Hughenden last week. Miss Mildred Gibson stayed for a few days.

Mrs. Doug Burnett and Mrs. Glen McAfee motored to Edmonton last week-end.

Mrs. F. Reynolds of Wainwright spent a week visiting friends in the district recently.

Mr. and Mrs. Burrell Gibson and family motored to St. Paul on Sunday.

Miss Louise Redmond, B.Sc. of Two Hills, spent the week-end at home. Mrs. F. Redmond and Mrs. W. Redmond drove over for her.

Miss Marlene Burnett is spending a few days in Wainwright with Mrs. F. Reynolds.

Mr. and Mrs. W. Cornfield had as their guest recently Miss Helen Entwistle of Toronto.

Mr. and Mrs. W. Cornfield, Donald and Jeannette and Miss Entwistle were in Edgerton last week-end to attend the wedding of Miss Helen Cornfield.

Harvesting in this district has begun although on a small scale as yet.

### Manitoba Station Plans To Process 450 White Whales

CHURCHILL, Man. — The whale factory at this Hudson Bay port expects to process about 450 white whales in its first year of operation, Manager Earl Kruse says.

From July 1 to mid-August about 300 had been caught. It is expected the plant will run another month.

Mr. Kruse, a young Norwegian who took air force training at Little Second World War, has had seven years' whaling experience in the Antarctic.

An Englishman and a half a dozen Eskimos—the only ones in Churchill—form his hunting and factory crew. The whales abound in Hudson Bay near the factory in the mouth of the Hudson River.

The Eskimos use a freighter canoe and try to drive a whale into shallow water before harpooning it. Attached to the harpoon, which is thrown by hand, is a line with an airtight can on the end.

The can makes it hard for the whale to dive and in any case it can't go far down because it's in the shallow. When the whale comes up for air the natives shoot him with high-powered rifles.

The average whale weighs about 1,000 pounds. The factory extracts about 25 gallons of whale oil from each carcass. The meat is ground and frozen for shipment to Winnipeg as fox and mink feed.

Whale oil is used for manufacture of margarine and soap products, Mr. Kruse said. But it is not used for Canadian Margarine, being sent to European countries.

Wife to husband, after several rounds of drinks at a cocktail party: "Henry, don't take another cocktail. Your face is already getting blurred." —The Reader's Digest.

### 500 Harvesters To Come From The East To Alberta

The annual Dominion-Provincial movement of harvesters to the prairie provinces commenced recently with the bulk of the movement taking place late in August. It was announced by Honourable Milton F. Gregg, Minister of Labour.

While the exact number required for the movement is not yet known, it is expected that at least 2,000 will make the trip. The crop is expected to be considerably heavier than last year although somewhat later, the Minister pointed out.

In most years Manitoba harvests its crop earlier than Saskatchewan and Alberta which has enabled harvesters to start work in Manitoba then continue on to Saskatchewan or Alberta. This year, however, Manitoba's crop is much later than usual and is expected to be ready for harvesting about the same time as the other prairie provinces. This may considerably increase the overall demand for harvest help, explained Mr. Gregg.

The heaviest crop is expected in Saskatchewan and about 1,000 of the Eastern workers will be moved there. Manitoba and Alberta will require at least 500 each, stated the Minister.

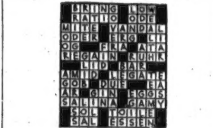

All workers recruited from points in Quebec and Ontario will be despatched to Winnipeg where distribution to prairie points will be made.

Mr. Gregg pointed out that only harvesters who could be spared from agricultural work in their own area would be recruited for the trip West.

### Card of Thanks

I wish to thank the Sunshine Club, United W.A., Old Timers and all my friends who sent fruit, candies, cards and flowers to me while I was in the hospital. Also the Doctors and Nurses for their kindness during my illness.

MRS. EARL GOHTON  
Edgerton.

### YOUNG ENTRY IN CATTLE SHOW

—Central Press Canadian  
Five-year-old John Jensen, shows he wants to be friends with three-month-old Lord Beaton. The Richmond Hill, Ont., calf is one of the entries in the Canadian National Exhibition's Cattle Show this year. More than 1,100 head of cattle are expected to vie for \$4,000 in prize money and championship honors when the show gets under way Aug. 30.

### McCafferty Notes

Mr. and Mrs. Jack Pell and family of Monitor, were visitors at the home of Mrs. Merle Egan last Tuesday. Also visiting there last week were Mr. and Mrs. Rogers of the Silver Lake district. Mrs. Rogers is Bill Rogers' sister.

Mr. and Mrs. Bert Wilkinson and children have returned to the district. Bert has been attending summer school.

Betty and Shirley Smithson came home Sunday from Manville, where they have been visiting with their aunt, Mrs. Ralph Ridd.

Glen Davis was down from Edmonton last week.

Learn to creep before you run.

### Arrange Cream Pickup Service In Case Of Railway Strike

In the event of a Railway Strike on August 22nd, the following cream pickup service will be provided by Northern Alberta Dairy Pool, Edgerton.

## INDIAN'S INDUSTRIES FORGE AHEAD

(Continued from page nine)  
Industrial purposes from 14,475 tons in the first quarter of 1949 to 33,367 tons in the fourth quarter. Satisfactory allotment of steel was made for the construction of new factories and for the expansion of existing ones.

According to the general policy of the Government to reduce prices of essential commodities, the steel and iron prices of all categories of steel were reduced by Rs. 30 per ton from December 1949.

Production of steel during the first quarter of 1950 was 236,041 tons. For the second quarter, production is estimated at 285,000 tons. The Government of India have sanctioned a loan of Rs. 50,00,000 to the Steel Corporation of Bengal to enable it to increase production by 200,000 tons a year.

Coal production registered an all-time record of 31,400,000 tons in 1949 as against 29,820,000 tons in 1948. Owing to better transport facilities, despatches from collieries improved from 25,800,000 tons in 1948 to 27,900,000 tons in 1949. The total railings and despatches during the first four months of 1950 were 11,30,541 and 8,42,500 tons respectively.

Coal exports increased in 1949. Australia has now become a regular customer for Indian coal. India also supplied the agreed quantities of coal to Pakistan.

New coalmines are being developed. The Central Government has decided to undertake the prospecting of the Garo Hills coalfields in Assam. The Government of Madras is investigating the lignite deposits in that State. The Government of Madhya Pradesh has undertaken the development of the Kampe fields with the assistance of a British firm. The Jharkhand Mining and Construction Company, which has been formed by the Central Government in association with the British firm to develop strip-mining in India, has almost completed the work of removal of over-burden at the Bokaro Colliery in Bihar. It is now engaged in similar work at the Khargali Colliery also in Bihar.

## Cement and Paper

Production of cement increased from 1,540,000 tons in 1948 to 2,060,000 tons in 1949. During the first quarter of 1950 over 650,000 tons of cement were produced. The estimated production for the second quarter is also about 650,000 tons. At present there are 21 cement factories with a rated capacity of 3,000,000 tons a year. In 1950, new productive capacity of 27,000 tons is expected to come into operation, while in 1951 productive capacity will be increased by a further 800,000 tons.

The improvement in the production of paper, which began in 1948, continued in 1949. Production increased from 98,500 tons in 1948 to 103,300 tons in 1949. Owing to higher Indian output and larger imports, complete decontrol of paper was announced recently.

## Jute Industry

In spite of the difficulties of obtaining supplies of raw jute from Eastern Pakistan, the jute industry maintained production at pre-determined levels and by reducing hours of work, averted the danger of unemployment. Under the short-term Indo-Pakistan trade agreement, Pakistan was to supply India 215,000,000 lbs. of raw jute by July 31, 1950. Out of this, only a little over 82,000,000 lbs. has reached India by July 2, 1950. Efforts are being made to persuade Pakistan to speed up deliveries. Meanwhile, India has launched a scheme to step up raw jute production and output this year is expected to be well above last year's.

In the rest of the industrial field, the record of 1949 has been satisfactory. There has been improvement in the production of electric motors, transformers, electric lamps, bicycles, etc.

## State-sponsored Projects

Among new industries being developed under Government auspices, the most important is the machine tool industry. In April 1949, the Government of India entered into an agreement with a Swiss firm, Messrs. Oerlikon Machine Tool Works, for establishing a State-owned machine tool factory in Bangalore. It is proposed to manufacture machine tools in five stages spread over a period of six years. In the first two stages, manufacture of high speed lathes, high speed shaping machines, heavy duty drilling machines, milling machines and turret lathes will be undertaken.

In the third and fourth stages planning machines and grinding machines will be manufactured. In the last stage the manufacture of tool room lathes, radial drilling machines and horizontal boring machines will be undertaken. An Ancillary Industries Fund, a ball bearing factory, a gear cutting factory, a central foundry and a training school and workshop will also be established. The total capital expenditure is estimated at about Rs. 150,00,000 and the value of the annual output about Rs. 30,00,000. The Swiss firm is investing 10 per cent of the capital. The greater part of the land required for the factory has been made available, free of cost, by the Mysore Government.

With the technical assistance of the Standard Telephone and Cable Ltd. of Britain, a factory is being established at Ansonel in West Bengal for the manufacture of dry core paper insulated telephone cables. It is expected to go into production by early 1952. Negotiations with a Swedish firm have been completed for the construction of a Government-owned factory for the manufacture of penicillin, sulphadiazine and anti-malarials. The factory is estimated to cost Rs. 35,00,000.

The Fertiliser Factory at Sindri, Bihar, one of the largest of its kind in the world, is nearing completion. Designed to manufacture 1,000 tons of ammonium sulphate per day, the factory will go into production in 1951. Some of the operational staff of the factory have been given specialised training abroad.

The most important raw materials required for the factory are gypsum, coal and coke. Deposits of suitable gypsum have been located in Bihar and Jodhpur. An order for 100,000 tons of gypsum for stockpiling from Bikaner has been placed.

## NOTICE TO CREDITORS AND CLAIMANTS

In the Estate of George William McEwen, late of Chauvin in the Province of Alberta, Farmer, deceased.

Notice is hereby given that all persons having claims upon the estate of the above named George William McEwen, who died on the 18th day of April A.D. 1950, are required to file with the undersigned Administrator, the Public Trustee for the Province of Alberta, Provincial Building, 1044-101A Avenue, Edmonton, Alberta, by the 15th day of October A.D. 1950, a full statement duly verified of their claims and of any securities held by them, and that after that date the Administrator will distribute the assets of the deceased among the parties entitled thereto, having regard only to the claims of which notice has been so filed or which have been brought to his knowledge.

DATED this 19th day of August, A.D. 1950.

THE PUBLIC TRUSTEE FOR THE PROVINCE OF ALBERTA  
Administrator of the Estate of George William McEwen, deceased.

By his solicitors,  
JAMIESON & JAMIESON,  
215 McLeod Building,  
Edmonton, Alberta.

## NOTICE

In the matter of the Chauvin Agricultural Society (in Liquidation).

Pursuant to the Agricultural Societies Act, The Minister of Agriculture has authorized the Liquidator to call a meeting of the persons who were members of the Society immediately before its disorganization, for the purpose of passing a resolution regarding the disposition of any surplus.

This meeting will be held at the Town Hall, Chauvin, at 2:30 p.m., September 1st, 1950.  
P. W. JOHNSON, Liquidator  
Chauvin Agricultural Society (in Liquidation)

## ready for publication while 225 standards are under preparation. So far it has not been obligatory on industries to adopt standards evolved by the Institution. It has now been suggested that the use of these standards by industry should be put on a statutory basis.

## Cottage Industries

Efforts are being made to revitalize cottage industries and to find export markets for them. A Central Cottage Industries Emporium was opened in New Delhi in April 1949. A show room to exhibit Indian handicrafts and products of cottage industries has since been opened in the Indian Trade Commissioner's Office in New York. An Indian delegation went to Japan to study the development of cottage industries in that country and to obtain machinery suitable for use in India. The machinery purchased by the delegation has already been installed. Indian manufacturers are also being encouraged to make similar machines in India. (G.I.B.)

## Aircraft Manufacture

The Hindustan Aircraft Ltd., Bangalore, has so far assembled 30 Pratik aircraft. The airframe parts of some of them were manufactured entirely in the factory. Development work on two types of trainer aircraft, one a primary trainer HT-2 and the other an Advanced Training HT-16, has made good progress. Construction of two prototypes of HT-2 has begun. The company has recently undertaken manufacture of fighter aircraft.

The programme of building rail coaches of improved type by the factory is progressing satisfactorily. Eighty-five all-metal coaches were completed and delivered up to the end of May 1950. Construction of all-metal bus bodies is also being undertaken. The factory has been earning a profit since 1947-48.

## Monazite Factory

A factory for the processing of monazite, occurring in the beach sands of Travancore, is to start functioning in Alwayar, Travancore before April next year. The Government of India and the Travancore Cochin Government have jointly formed a corporation for running the factory which is expected to process about 1,500 tons of monazite annually. India has so far been importing monazite and other rare earths required for use in various industries.

## Quality Control

To improve the quality of Indian products, the Indian Standards Institution with a membership of nearly 3,000 is evolving standards for various subjects. The Institution has already published 34 standards. Another 14 are
